

City of Dodge City Consumer Confidence Report 2018

Your Drinking Water Surpasses All State and Federal Standards

The City of Dodge City is committed to providing our customer-owners with reliable drinking water. Throughout 2018, as in years past, Dodge City water has met or surpassed all state and federal health standards.

We are pleased to provide you with this report which details where our water comes from, what our water contains, and other related information. The Safe Water Act (SDWA) requires that utilities issue an annual “**Consumer Confidence Report**” to customers in addition to other notices that may be required by law. You as an informed consumer are our best ally in maintaining a safe and reliable source of drinking water.

How can I get involved?

We encourage public interest in our community’s decisions affecting drinking water. Regular City Commission meetings occur on the 1st & 3rd Mondays of each month at City Hall, 806 2nd Avenue, at 7:00 p.m. The public is welcome. Find out more about the City of Dodge City and the Utility Department on the Internet at www.dodgecity.org. In addition, you may call the Utility Department at 620-225-8176 for questions concerning this report or other questions you may have about your water.

Overview

In 2018 the Water Department distributed **2.2 billion gallons of water** to our customers. There were an average of **8,498** customers for the City of Dodge City.

Water Source

Dodge City Utilities water is obtained from groundwater from the Ogallala Aquifer. The Ogallala Aquifer runs from Nebraska, through Western Kansas to West Texas. The City currently has 22 wells that it utilizes to pump this water, plus 7 wells in conjunction with National Beef, for a total of 29 wells. There are also two additional wells voluntarily taken out of service due to concerns over nitrates detections.

Frequently Asked Questions

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the **Environmental Protection Agency’s Safe Drinking Water Hotline (800-426-4791)**. The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining or farming. Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban storm water runoff and residential uses. Organic Chemical Contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems. Radioactive contaminants, that can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

City of Dodge City Water Quality Report Consumer Confidence Report 2018

Regulated Contaminants

Contaminant	MCL	Highest Value	Range (Low)	Range (High)	Sample Date	Violation	Typical Source
Arsenic (ppb)	10	2.7	2.7	2.7	2/12/18	No	Erosion of natural deposits
Atrazine (ppb)	3	4.1	4.1	.024	3/6/16	No	Runoff from herbicide
Barium (ppm)	2	.011	.011	.011	2/12/18	No	Discharge from metal refineries
Chromium (ppb)	100	4.5	4.5	4.5	1/26/16	No	Discharge from steel & pulp mills
Fluoride (ppm)	4	2.5	.45	2.5	1/26/16	No	Erosion of nat. deposits; water additive which promotes strong teeth; Discharge from fertilizer & aluminum factories
Ethylbenzene (ppb)	700	2.1	2.1	2.1	3/26/2018	No	Discharge from petroleum refineries
Nitrate (ppm) Measured as Nitrogen	10	9.3	.96	9.3	3/26/2018	No	Runoff from fertilizer use
Selenium (ppb)	50	13	.27	13	2/12/2018	No	Erosion of natural deposits
Trichloroethylene	5	.55	.55	.55	8/18/14	No	Discharge from metal degreasing sites and other factories

Lead and Copper

Contaminant	90th Percentile	Range (low/high)	Unit	AL	Sites over AL	Violation	Typical Source
Copper (ppm)	0.18	0.0094- .57	Ppm	1.3	0	No	Corrosion of household plumbing
Lead (ppb)	1.6	1.1-38	ppb	15	1	No	Corrosion of household plumbing

Disinfection Byproducts

Contaminant	Highest RAA	Range (low/high)	Unit	MCL	MCLG	Violation	Typical Source
Total Trihalomethanes TTHM	28	2.3 - 23	ppb	80	2018	No	By-products of drinking water chlorination
Total Haloacetic Acids HAA5	6	2 - 4.1	ppb	60	2018	No	

Radiological Contaminants

Contaminant	Highest Value	Range (low/high)	Unit	MCL	MCLG	Violation	Typical Source
Combined Radium (-226 & -228)	0.8	0.7-0.8	PCI/L	5	0	No	Erosion of natural deposits
Combined Uranium	11.3	11.3	µg/L	30	0	No	Erosion of natural deposits
Gross Alpha, Excl. Radon & U	6.2	6.2	pCi/l	15	0	No	Erosion of natural deposits

Secondary Contaminants

Contaminant	MCL	Highest Value	Range (Low)	Range (High)	Sample Date	Violation	Typical Source
1,2,4 Trimethylbenzene (bbp)		1.2	1.2	1.2	4/13/11	No	
1,3,5 Trimethylbenzene (ppb)		1.6	1.6	1.6	2/26/08	No	
Alkalinity, Total MG/L	300	170	170	170	2/12/2018	No	
Aluminum	0.05	0.073	0.014	0.073	2/12/13	No	
Calcium MG/L	200	270	270	270	2/12/2018	No	Mineral content contributing to hardness of water.
Chloride MG/L	250	54	54	54	2/12/2018	No	
Conductivity UMHOS/CM	1500	1900	1900	1900	2/12/2018	No	
Corrosivity LANG	0	.08	.08	.08	2/12/2018	No	
Gross Uranium by Activity PCI/L		9.6	9.6	9.6	5/5/14	No	
Hardness, Total (AS CAC03) MG/L	400	850	850	850	2/12/2018	No	
Iron (ppm)	0.3	0.85	0.032	0.85	1/26/16	No	Sediment; metallic taste; reddish or orange staining.
Magnesium	150	45	45	45	2/12/2018	No	
Manganese MG/L	0.05	0.013	0.0011	0.013	1/26/16	No	Mineral content contributing to hardness of water.
O-Xylene MG/L	10	.0019	.0019	.0019	3/26/2018	No	
Nickel (mg/l)	0.1	0.002	0.0012	0.002	1/26/16	No	Erosion of nat. deposits
PH	8.5	7	7	7	2/12/2018	No	
Phosphorus, total	5	0.027	0.02	0.027	1/26/16	No	
Potassium MG/L	100	6.1	6.1	6.1	2/12/2018	No	
Silica	50	29	29	29	2/12/2018	No	Mineral content contributing to hardness of water.
Sulfate (mg/l)	250	610	610	610	2/12/2018	No	Almost all natural waters contain sulfate ions, their presence is desirable at lower levels for optimal taste.
Sodium (ppb)	100	100	100	100	2/12/2018	No	Erosion of natural deposits; leaching
TDS Total Dissolved Solids	500	1200	1200	1200	2/12/2018	No	Hardness of water effects this result.
Xylene, META and Para UG/L		7.5	7.5	7.5	3/26/2018	No	
Zinc MG/L	5	.0069	.0069	.0069	2/12/2018	No	

What Does This Table Mean?

The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor certain contaminants less than once per year because the concentrations of these contaminants does not change frequently.

DEFINITIONS of terms:

MCLG: Maximum contaminant level goal is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL: Maximum contaminant level is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
µg/L: Micrograms per liter
AL: Action level
NTU: Nephelometric Turbidity Units
pCi/L: Picocuries per liter
ppm: Parts per million (ppm) or Milligrams per liter (mg/l)-one part per million corresponds to one minute in two years or a single penny in \$10,000.
ppb: Parts of contaminant per billion parts of water or Micrograms per liter-one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
ppt: Parts per trillion, or nanograms per liter.
ppq: Parts per quadrillion, or picogram per liter

City of Dodge City 2018 Consumer Confidence Report

***During the 2018 calendar year,
we had 0 violation(s)
of drinking water regulations. ****

Water Testing:

Our water system is required to test a 4 samples per quarter per the haloacetic acids (HAA) and total trihalomethanes (TTHM) By-product (DBP) Rule. Trihalomethanes are the byproducts of chlorination of water that contains natural organic matter. A U.S. Environmental Protection Agency (EPA) survey shows that THMs are present in most chlorinated water supplies. They pose a less acute health risk than do waterborne diseases. If the limits set by the state are exceeded, the City of Dodge City Water Department must notify the citizens of Dodge City. **Action Taken:** If any violations occur, the City of Dodge City would inform the public via Public Notice through the Dodge City Globe, Facebook and www.dodgecity.org.

FYI

Manganese, Silica, & Sulfate

EPA has established National Secondary Drinking Water Regulations that set **non-mandatory** water quality standards for fifteen (15) other contaminants that are not considered a risk to human health. They were established only as guidelines to assist public water supplies in managing water for aesthetic considerations. These aesthetic effects include taste, odor, color, corrosivity, foaming and staining properties of water. **Health Effects:** People who are on sodium restriction should be aware of the levels in their drinking water and softened water is usually done with salt systems.

Results of Radon Monitoring

Dodge City does not test for Radon. Radon is a radioactive gas that you can't see, taste, or smell. It is found throughout the U.S. Radon can move up through the ground and into a home through cracks and holes in the foundation. Radon can build up to high levels in all types of homes.

Radon can also get into indoor air when released from tap water from showering, washing dishes, and other household activities. Compared to radon entering the home through soil, radon entering the home through tap water will in most cases be a small source of radon in indoor air. Radon is a known human carcinogen. Breathing air containing radon can lead to lung cancer. Drinking water containing radon may also cause increased risk of stomach cancer. If you are concerned about radon in your home, test the air in your home. Testing is inexpensive and easy. Fix your home if the level of radon in your air is 4 picocuries per liter of air (pCi/L) or higher. There are simple ways to fix a radon problem that aren't too costly. For additional information, call your state radon program or call EPA's Radon Hotline (800-SOS-RADON).
